Fitch Ratings is a global rating agency committed to providing the world's credit markets with independent and prospective credit opinions, research, and data. With 50 offices worldwide, Fitch Ratings' global expertise, built on a foundation of local market experience, spans across capital markets in over 150 countries. Fitch Ratings is widely recognized by investors, issuers, and bankers for its credible, transparent, and timely coverage.

Fitch is recognised by the Ministry of Finance of Japan, the Securities and Futures Authority of the United Kingdom, the Hong Kong Monetary Authority, the Central Banks of Finland, Ireland and the Netherlands, the Bank of Italy, the Bank of England and the U.S. Securities and Exchange Commission.

Fitch Ratings is also recognised in the U.S. by the Federal Reserve, the Office of the Comptroller of the Currency, the Federal Deposit Insurance Commission, the Office of Thrift Supervision, the National Credit Union Administration, the National Association of Insurance Commissioners, the Department of Labour, the North American Securities Administrators Association, the National Association of Securities Dealers, the New York and Philadelphia Stock Exchanges and many state securities and legal investment authorities.

Fitch Ratings currently maintains coverage of approximately 110 covered bonds, 850 managed funds, 5,500 financial institutions, including over 3,200 banks and 1,100 insurance companies. Finance & leasing companies, broker-dealers, managed funds, and covered bonds make up the remainder of the company's financial institution coverage universe. Additionally, Fitch currently rates over 1,700 corporate issuers, 100 sovereigns, 200 sub-sovereigns, 300 global infrastructure ratings, and 45,000 U.S. municipal transactions.

The company currently has over 6,900 U.S. structured finance transactions under surveillance. Fitch also maintains surveillance on approximately 1,500 European and 600 Asia-Pacific structured finance transactions. The company currently employs more than 1,798 Professionals worldwide.

Monthly Ratings Update (Cont.)

Corporate Ratings

Ratings Upgraded

Super Group Ltd

Fitch Ratings has upgraded Super Group Ltd's (Super Group) National Long-term rating and National Senior unsecured ratings to 'BB+(zaf)' from 'BB-(zaf)'. The National Short-term rating is affirmed at 'B(zaf)'. The Outlook on the Long-term rating has been revised to Stable from Negative

Comments

South Africa - Improved Gold Production Unlikely to be Sustained

Fitch Ratings says that the growth in South Africa's gold production output in the three months ending August 2010 is unlikely to be sustained over the long-term given the growing international cost competitiveness of gold mines located outside of South Africa. (Full comment on www.fitchratings.com)

South African Retail - Rising Competition and Margin Pressure

Fitch Ratings says the landscape of the South African retail market is likely to change significantly with the foray of Wal-Mart Stores Inc (Walmart) ('AA'/Stable) into the local market. This is expected to lead to increased competition and margin pressure driving greater efficiencies and price benefits to consumers through increased value and choice. (Full comment on www.fitchratings.com)

South African Construction Sector Recovery to Lag into 2012

Fitch Ratings believes that the South African construction sector is only expected to significantly improve from 2012 onwards, as the recovery continues to lag a sustained recovery in the broader economy on the back of continued deferral of government infrastructure spending. This delayed recovery is expected to add pressure to the already thinly-stretched credit profiles of domestic construction companies in 2011. (Full comment on www.fitchratings.com)

Insurance Ratings

Ratings Affirmed

RMB Structured Insurance Limited and RMB Financial Limited

Fitch Ratings has affirmed South Africa-based RMB Structured Insurance Limited's (RMBSI) National Insurer Financial Strength (IFS) rating at 'A+(zaf)' and International IFS rating at 'BBB'. Fitch has also affirmed Ireland-based RMB Financial Services Limited's (RMBFS) International IFS rating at 'BBB'. The Outlooks on the National and International IFS ratings are Stable.

Monthly Ratings Update (Cont.)

International Public Finance Ratings Metropolitan Municipality of Johannesburg

Fitch Ratings has affirmed the South African Metropolitan Municipality of Johannesburg's (CoJ) ratings at Long-term local currency 'BBB+', National Long-term 'AA-(zaf)' and National Short-term 'F1+(zaf)'. The Outlooks are Stable.

***Ratings Revised* Lagos State**

Fitch Ratings has today revised Lagos State's (Lagos) Long-term Foreign currency rating outlook to Negative from Stable. It has also simultaneously affirmed Lagos's Long-term Foreign and Local currency ratings at 'BB-', Short-term foreign currency rating at "B" and national rating at AA (nga). The Outlook on the Long-term local currency and national ratings is Stable.

Sovereign Ratings Nil

Structured Finance Ratings *Ratings Affirmed* Asset Backed Arbitrated Securities (Pty) Limited'

Fitch Ratings has affirmed Asset Backed Arbitrated Securities (Pty) Limited's (ABACAS) Series 1 and Series 2 asset-backed commercial paper (ABCP) notes at National Short-term 'F1+(zaf)', following a satisfactory review of the programme.

Blue Titanium Conduit Limited

Fitch Ratings has affirmed Blue Titanium Conduit Limited's (Blue Titanium) asset backed commercial paper (ABCP) notes at National Short-term 'F1+(zaf)', following a satisfactory review of the programme.

Special Report

EMEA Structured Finance Snapshot Highlights Increasing New Issue Activity

Fitch Ratings publishes the fourth edition of its "EMEA Structured Finance Snapshot" today. The report highlights a more diverse pipeline of new issuance building on the back of widespread performance stabilisation.

Rating Definitions

Introduction

Fitch credit ratings are an opinion on the ability of an entity or of a securities issue to meet financial commitments, such as interest, preferred dividends, or repayment of principal, on a timely basis. Fitch credit ratings apply to a variety of entities and issues, including but not limited to sovereigns, governments, structured financings, and corporations; debt, preferred/preference stock, bank loans, and counterparties as well as the financial strength of insurance companies and financial guarantors.

Credit ratings are used by investors as indications of the likelihood of getting their money back in accordance with the terms on which they invested. Thus, the use of credit ratings defines their function: “investment grade” ratings (international Long-term ‘AAA’ - ‘BBB’ categories; Short-term ‘F1’ - ‘F3’) indicate a relatively low probability of default, while those in the “speculative” or “non-investment grade” categories (international Long-term ‘BB’ - ‘D’; Short-term ‘B’ - ‘D’) either signal a higher probability of default or that a default has already occurred. Ratings imply no specific prediction of default probability. However, for example, it is relevant to note that over the Long-term, defaults on ‘AAA’ rated U.S. corporate bonds have averaged less than 0.10% per annum, while the equivalent rate for ‘BBB’ rated bonds was 0.35%, and for ‘B’ rated bonds, 3.0%.

Entities or issues carrying the same rating are of similar but not necessarily identical credit quality since the rating categories do not fully reflect small differences in the degrees of credit risk.

Fitch credit and other ratings are not recommendations to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of any payments of any security. The ratings are based on information obtained from issuers, other obligors, underwriters, their experts, and other sources Fitch believes to be reliable. Fitch does not audit or verify the truth or accuracy of such information. Ratings may be changed or withdrawn as a result of changes in, or the unavailability of, information or for other reasons.

Our program ratings relate only to standard issues made under the program concerned; it should not be assumed that these ratings apply to every issue made under the program. In particular, in the case of non-standard issues, i.e. those that are linked to the credit of a third party or linked to the performance of an index, ratings of these issues may deviate from the applicable program rating.

Credit ratings do not directly address any risk other than credit risk. In particular, these ratings do not deal with the risk of loss due to changes in market interest rates and other market considerations.

General Rating Definitions

A **Rating Outlook** indicates the direction a rating is likely to move over a one to two-year period. Outlooks may be positive, stable or negative. A positive or negative Rating Outlook does not imply a rating change is inevitable. Similarly, ratings for which outlooks are 'stable' could be upgraded or downgraded before an outlook moves to positive or negative if circumstances warrant such an action. Occasionally, Fitch Ratings may be unable to identify the fundamental trend. In these cases, the Rating Outlook may be described as evolving.

- Italics Indicate a rating change since the previous listing.
- ↑ Indicates that the rating was upgraded.
- ↓ Indicates that the rating was downgraded.
- **Bold indicates a new rating added since the previous listing.**
- ▲ ▼ ◆ Rating Watch: Indicates positive, negative or evolving.
- † Indicates National Guarantee.
- (*n) Indicates Joint Issues.

International Credit Ratings

Fitch's international credit ratings are applied to the spectrum of corporate, structured, and public finance entities and issues. They cover sovereign (including supranational and subnational), financial, bank, insurance, and other corporate entities and the securities they issue, as well as municipal and other public finance entities, and securities backed by receivables or other financial assets, and counterparties. When applied to an entity; these Long- and Short-term ratings assess its general creditworthiness on a senior basis. When applied to specific issues and programs, these ratings take into account the relative preferential position of the holder of the security and reflect the terms, conditions, and covenants attaching to that security.

International credit ratings assess the capacity to meet foreign currency or local currency commitments. Both "foreign currency" and "local currency" ratings are internationally comparable assessments. The local currency rating measures the probability of payment within the relevant sovereign state's currency and jurisdiction and therefore, unlike the foreign currency rating, does not take account of the possibility of foreign exchange controls limiting transfer into foreign currency.

Other Ratings

Fitch also provides specialised ratings of servicers of performing and nonperforming multifamily and commercial mortgages, cash flow bond ratings, and volatility ratings of collateralised mortgage obligations and bond funds. In addition, we provide Individual and Support ratings of banks, which assess the likelihood that they will get into difficulties and, in the event of this actually happening, whether they would indeed receive support. In particular cases Fitch offers National Ratings, which are an assessment of credit quality relative to the rating of the "best" credit risk in a country. This "best" risk will normally, although not always, be assigned to all financial commitments issued or guaranteed by the sovereign state. For particular countries Fitch also assigns National Insurance Financial Strength Ratings using a scale unique to such ratings.

Analytical Considerations

When assigning ratings, Fitch considers the historical and prospective financial condition, quality of management, and operating performance of the issuer and of any guarantor, any special features of a specific issue or guarantee, the issuer's relationship to other obligations of the issuer, as well as developments in the economic and political environment that might affect the issuer's financial strength and credit quality. In the case of a structured financing, the quality of its underlying assets and the integrity of its legal structure are considered. In the case of banks, for which sector there is a history of rescue by sovereign "lenders of last resort" or by major shareholders, the potential strength of any such support is also taken into account in the ratings.

Investment-grade ratings reflect expectations of timeliness of payment. However, ratings of different classes of obligations of the same issuer may vary based on expectations of recoveries in the event of a default or liquidation. Recovery expectations, which are the amounts expected to be received by investors after a security defaults, are a relatively minor consideration in investment grade ratings, but we do use "notching" of particular issues to reflect their degree of preference in a winding up, liquidation, or reorganization, as well as other factors. Recoveries do, however, gain in importance at lower rating levels, because of the greater likelihood of default, and become the major consideration at the 'DDD' category. Factors that affect recovery expectations include collateral and seniority relative to other obligations in the capital structure.

Foreign currency ratings are typically subject to a “country ceiling”. A sovereign government’s powers of taxation and foreign exchange control mean that its Long-term foreign currency rating sets a ceiling for the ratings of other issuers within its jurisdiction. If Fitch has not formally rated a sovereign state, we can establish an assessment which serves as a ceiling for other Fitch-rated issuers in the country in question. We also note that it is possible to achieve a rating above the country ceiling by means of financial or legal structuring. The sovereign state’s local currency rating will also generally be the highest rating of any entity in its jurisdiction, but entities with particular strengths may on occasion exceed it.

Fitch bases the rating differential between preferred/preference stock and senior and subordinated debt on the issuer’s senior debt rating, the specific terms and conditions of the preferred instrument, the amount of preferred stock and of subordinated debt in the capital structure, coverage ratios, the use of proceeds from a preferred issue, the issuer’s rating outlook, and the influence of regulators on the issuer’s ability to pay preferred dividends. For rating purposes, Fitch generally treats preferred stock in a manner similar to that it adopts for deeply subordinated debt. The degree of “notching”, or number of rating grades below senior debt, will be narrower for investment-grade entities and wider for those in the speculative grades.

Fitch’s approach to rating unsecured bank loans is similar to that for other unsecured debt. Ratings of secured loans, however, incorporate a higher weighting of the value of potential recoveries to reflect the importance of recoveries to investors in these loans. Thus, speculative ratings will be influenced more by recoveries than investment-grade ratings.

Variable rate demand obligations and other securities which contain a demand feature will have a dual rating, such as ‘AAA/F1+’. The first rating denotes Long-term ability to make principal and interest payments. The second rating denotes ability to meet a demand feature in full and on time.

International Long-Term Ratings

The following ratings scale applies to foreign currency and local currency ratings.

Investment Grade

AAA

Highest Credit Quality. 'AAA' ratings denote the lowest expectation of credit risk. They are assigned only in case of exceptionally strong capacity for timely payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA

Very High Credit Quality. 'AA' ratings denote a very low expectation of credit risk. They indicate very strong capacity for timely payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A

High Credit Quality. 'A' ratings denote a low expectation of credit risk. The capacity for timely payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to changes in circumstances or in economic conditions than is the case for higher ratings.

BBB

Good Credit Quality. 'BBB' ratings indicate that there is currently a low expectation of credit risk. The capacity for timely payment of financial commitments is considered adequate, but adverse changes in circumstances and in economic conditions are more likely to impair this capacity. This is the lowest investment-grade category.

Speculative Grade

BB

Speculative. 'BB' ratings indicate that there is a possibility of credit risk developing, particularly as the result of adverse economic change over time; however, business or financial alternatives may be available to allow financial commitments to be met. Securities rated in this category are not investment grade.

B

Highly Speculative. 'B' ratings indicate that significant credit risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is contingent upon a sustained, favourable business and economic environment.

CCC, CC, C

High Default Risk. Default is a real possibility. Capacity for meeting financial commitments is solely reliant upon sustained, favourable business or economic developments. A 'CC' rating indicates that default of some kind appears probable. 'C' ratings signal imminent default.

DDD, DD, D

Default. The ratings of obligations in this category are based on their prospects for achieving partial or full recovery in a reorganization or liquidation of the obligor. While expected recovery values are highly speculative and cannot be estimated with any precision, the following serve as general guidelines. 'DDD' obligations have the highest potential for recovery, around 90% - 100% of outstanding amounts and accrued interest. 'DD' indicates potential recoveries in the range of 50% - 90% and 'D' the lowest recovery potential, i.e., below 50%.

Entities rated in this category have defaulted on some or all of their obligations. Entities rated 'DDD' have the highest prospect for resumption of performance or continued operation with or without a formal reorganization process. Entities rated

'DD' and 'D' are generally undergoing a formal reorganization or liquidation process; those rated 'DD' are likely to satisfy a higher portion of their outstanding obligations, while entities rated 'D' have a poor prospect of repaying all obligations.

International Short-Term Ratings

The following ratings scale applies to foreign currency and local currency ratings. A Short-term rating has a time horizon of less than 12 months for most obligations, or up to three years for US public finance securities, and thus places greater emphasis on the liquidity necessary to meet financial commitments in a timely manner.

F1

Highest Credit Quality. Indicates the strongest capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

F2

Good Credit Quality. A satisfactory capacity for timely payment of financial commitments, but the margin of safety is not as great as in the case of the higher ratings.

F3

Fair Credit Quality. The capacity for timely payment of financial commitments is adequate; however, near-term adverse changes could result in a reduction to non-investment grade.

B

Speculative. Minimal capacity for timely payment of financial commitments, plus vulnerability to near-term adverse changes in financial and economic conditions.

C

High Default Risk. Default is a real possibility. Capacity for meeting financial commitments is solely reliant upon a sustained, favourable business and economic environment.

D

Default. Denotes actual or imminent payment default.

Notes to Long-Term and Short-Term Ratings

"+" or "-" may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the 'AAA' Long-term rating category, to categories below 'CCC', or to Short-term ratings other than 'F1'.

'NR' indicates that Fitch Ratings does not rate the issuer or issue in question.

'Withdrawn': A rating is withdrawn when Fitch Ratings deems the amount of information available to be inadequate for rating purposes, or when an obligation matures, is called, or refinanced.

Rating Watch: Ratings are placed on Rating Watch to notify investors that there is a reasonable probability of a rating change and the likely direction of such change. These are designated as "Positive", indicating a potential upgrade, "Negative", for a potential downgrade, or "Evolving", if ratings may be raised, lowered or maintained. Rating Watch is typically resolved over a relatively short period.

A Rating Outlook indicates the direction a rating is likely to move over a one to two-year period. Outlooks may be positive, stable or negative. A positive or negative Rating Outlook does not imply a rating change is inevitable. Similarly, ratings for which outlooks are 'stable' could be upgraded or downgraded before an outlook moves to positive or negative if circumstances warrant such an action. Occasionally, Fitch Ratings may be unable to identify the fundamental trend. In these cases, the Rating Outlook may be described as evolving.

National Ratings

National Credit Ratings

For those countries in which foreign and local currency sovereign ratings are below 'AAA', and where there is a demand for such ratings, Fitch will provide national ratings. The national rating scale provides a relative measure of creditworthiness for rated entities only within the country concerned. Under this rating scale, a "AAA" Long-term national rating will be assigned to the best relative risk within that country, which, in most cases, will be the sovereign state.

The national rating scale is not based on default probabilities: it merely ranks the degree of perceived risk relative to the best credit risk in that same country. Like local currency ratings, national ratings exclude the effects of sovereign and transfer risk and exclude the possibility that investors may be unable to repatriate any due interest and principal repayments. However, unlike local currency ratings, national ratings are not internationally comparable and they are identified by the addition of a special identifier for the country concerned, such as "AAA(zaf)" for national ratings in South Africa.

National Short-Term Credit Ratings

F1(zaf)

Indicates the strongest capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Under Fitch's national rating scale, this rating is assigned to the "best" credit risk relative to all others in the same country and is normally assigned to all financial commitments issued or guaranteed by the sovereign state. Where the credit risk is particularly strong, a "+" is added to the assigned rating.

F2(zaf)

Indicates a satisfactory capacity for timely payment of financial commitments relative to other issuers or issues in the same country. However, the margin of safety is not as great as in the case of the higher ratings.

F3(zaf)

Indicates an adequate capacity for timely payment of financial commitments relative to other issuers or issues in the same country. However, such capacity is more susceptible to near-term adverse changes than for financial commitments in higher rated categories.

B(zaf)

Indicates an uncertain capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Such capacity is highly susceptible to near-term adverse changes in financial and economic conditions.

C(zaf)

Indicates a highly uncertain capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Capacity or meeting financial commitments is solely reliant upon a sustained, favourable business and economic environment.

D(zaf)

Indicates actual or imminent payment default.

Notes to Long-Term and Short-Term National Ratings

A special identifier for the country concerned will be added to all national ratings. For illustrative purposes, (xxx) has been used, as above.

"+" or "- may be appended to a national rating to denote relative status within a major rating category. Such suffixes are not added to the 'AAA(xxx)' Long-term

national rating category, to categories below 'CCC(xxx)' or to Short-term national ratings other than 'F1(xxx)'.

Rating Watch: Ratings are placed on Rating Watch to notify investors that there is a reasonable probability of a rating change and the likely direction of such change. These are designated as "Positive", indicating a potential upgrade, "Negative", for a potential downgrade, or "Evolving", if ratings may be raised, lowered or maintained. Rating Watch is typically resolved over a relatively short period.

In certain countries, regulators have established credit rating scales, to be used within their domestic markets, using specific nomenclature. In these countries, our National Short-term Rating definitions for F1+(xxx), F1(xxx), F2(xxx) and F3(xxx) may be substituted by the regulatory scales, e.g. A1+, A1, A2 and A3.

National Long-Term Credit Ratings

AAA(zaf)

'AAA' national ratings denote the highest rating assigned by Fitch in its national rating scale for that country. This rating is assigned to the "best" credit risk relative to all other issuers or issues in the same country and will normally be assigned to all financial commitments issued or guaranteed by the sovereign state.

AA(zaf)

'AA' national ratings denote a very strong credit risk relative to other issuers or issues in the same country. The credit risk inherent in these financial commitments differs only slightly from the country's highest rated issuers or issues.

A(zaf)

'A' national ratings denote a strong credit risk relative to other issuers or issues in the same country. However, changes in circumstances or economic conditions may affect the capacity for timely repayment of these financial commitments to a greater degree than for financial commitments denoted by a higher rated category.

BBB(zaf)

'BBB' national ratings denote an adequate credit risk relative to other issuers or issues in the same country. However, changes in circumstances or economic conditions are more likely to affect the capacity for timely repayment of these financial commitments than for financial commitments denoted by a higher rated category.

BB(zaf)

'BB' national ratings denote a fairly weak credit risk relative to other issuers or issues in the same country. Within the context of the country, payment of these financial commitments is uncertain to some degree and capacity for timely repayment remains more vulnerable to adverse economic change over time.

B(zaf)

'B' national ratings denote a significantly weak credit risk relative to other issuers or issues in the same country. Financial commitments are currently being met but a limited margin of safety remains and capacity for continued timely payments is contingent upon a sustained, favourable business and economic environment.

CCC(zaf), CC(zaf), C(zaf)

These categories of national ratings denote an extremely weak credit risk relative to other issuers or issues in the same country. Capacity for meeting financial commitments is solely reliant upon sustained, favourable business or economic developments.

DDD(zaf), DD(zaf), D(zaf)

These categories of national ratings are assigned to entities or financial commitments which are currently in default.

Source: Fitch

The table indicates the potential International local currency rating that could be assigned to an entity that had been assigned a South African National scale rating. This type of table is used as a tool by analysts working on both National ratings and International local currency ratings to ensure consistency between the two scales, and Fitch's expectation is that the rating relationships between National and International local currency ratings will typically correspond as indicated. The same core policies and methodologies are applied on a consistent basis in assigning National and International ratings. However, a rating committee has the discretion to identify the most appropriate rating to assign in each case. It is possible that a rating committee might come to a different rating than the mapping relationship indicated by the mapping table. Such a deviation from the mapping relationship is only expected in the small minority of cases, and any such deviations would be visible from the International local currency rating assigned.

The above mapping table applies specifically to entity ratings within South Africa. Due to the application of Fitch's current criteria in respect of counterparty risk (set out in two reports, *Counterparty Risk In Structured Finance Transactions: Hedge Criteria*, dated 1 August 2007 and *Commingling Risk in Structured Finance Transactions*, dated 9 June 2004), specifically the imposition of rating caps, two separate ratings on the National Scale may not show the same relativity as their corresponding International Ratings for Structured Finance transactions.

Bank Individual and Support Ratings

Support Ratings

The Support Ratings do not assess the quality of a bank. Rather, they are Fitch's assessment of whether the bank would receive support should this be necessary. We emphasize that these ratings constitute Fitch's opinions, although we may discuss the principals underlying them with the supervisory authorities for their comment or endorsement.

1

A bank for which there is an extremely high probability of external support. The potential provider of support is very highly rated in its own right and has a very high propensity to support the bank in question. This probability of support indicates a minimum Long-term rating floor of 'A-'.

2

A bank for which there is a high probability of external support. The potential provider of support is highly rated in its own right and has a high propensity to provide support to the bank in question. This probability of support indicates a minimum Long-term rating floor of 'BBB-'.

3

A bank for which there is a moderate probability of support because of uncertainties about the ability or propensity of the potential provider of support to do so. This probability of support indicates a minimum Long-term rating floor of 'BB-'.

4

A bank for which there is a limited probability of support because of significant uncertainties about the ability or propensity of any possible provider of support to do so. This probability of support indicates a minimum Long-term rating floor of 'B'.

5

A bank for which external support, although possible, cannot be relied upon. This may be due to a lack of propensity to provide support or to very weak financial ability to do so. This probability of support indicates a Long-term rating floor no higher than 'B-' and in many cases no floor at all.

Note

We emphasize that in our Support rating we are not analyzing how "good" or "bad" a bank is, but merely whether in our opinion it would receive support if it ran into difficulties.

Bank Individual and Support Ratings (cont.)

Individual Ratings

Fitch's Individual Ratings, which are internationally comparable, attempt to assess how a bank would be viewed if it were entirely independent and could not rely on external support. These ratings are designed to assess a bank's exposure to, appetite for, and management of risk, and thus represent our view on the likelihood that it would run into significant difficulties such that it would require support. The principal factors we analyze to evaluate the bank and determine these ratings include profitability and balance sheet integrity, franchise, management, operating environment, and prospects. Consistency is an important consideration.

A

A very strong bank. Characteristics may include outstanding profitability and balance sheet integrity, franchise, management, operating environment, or prospects.

B

A strong bank. There are no major concerns regarding the bank. Characteristics may include strong profitability and balance sheet integrity, franchise, management, operating environment or prospects.

C

An adequate bank which, however, possess one or more troublesome aspects. There may be some concerns regarding its profitability and balance sheet integrity, franchise, and management, operating environment or prospects.

D

A bank which has weaknesses of internal and/or external origin. There are concerns regarding its profitability and balance sheet integrity, franchise, management, operating environment or prospects. Banks in emerging markets are necessarily faced with a greater number of potential deficiencies of external origin.

E

A bank with very serious problems which either requires or is likely to require external support.

F

A bank that has either defaulted or, in Fitch Ratings' opinion, would have defaulted if it had not received external support. Examples of such support include state or local government support, (deposit) insurance funds, acquisition by some other corporate entity or an injection of new funds from its shareholders or equivalent.

Note

Gradations may be used among the ratings A to E: i.e. A/B, B/C, C/D, and D/E. No gradations apply to the F rating.

Insurer Financial Strength Ratings

The International Insurer Financial Strength Rating (IFS Rating) provides an assessment of the financial strength of an insurance organization and its capacity to meet senior obligations to policyholders and contract holders on a timely basis. The IFS Rating is assigned to the insurance organization itself, and no liabilities or obligations of the insurer are specifically rated unless otherwise stated (for example, Fitch Ratings may separately rate the debt obligations of an insurer). The IFS Rating can be assigned to insurance and reinsurance companies in all insurance sectors, including the life & health, property & casualty, mortgage, financial guaranty and title insurance sectors, as well as managed care companies such as health maintenance organizations.

The IFS Rating does not address the willingness of an insurance organization's management to honor its company's obligations, nor the quality of an insurer's claims-handling services. In the context of the rating, the timeliness of payments is considered relative to both contract and/or policy terms and also recognizes the possibility of acceptable delays caused by circumstances unique to the insurance industry, such as claims reviews, fraud investigations, and coverage disputes.

The IFS Rating is based on a comprehensive analysis of relevant factors that in large part determine an insurance organization's financial strength, including its regulatory solvency characteristics, liquidity, operating performance, financial flexibility, balance sheet strength, management quality, competitive positioning, and long-term business viability.

This is an international-scale rating, and incorporates relevant economic and political risks that could impair an insurance organization's capacity to meet its obligations. As a result, in most cases it would be rare for an insurance organization to achieve an IFS Rating that would be higher than the international long-term local currency ratings assigned to the obligations of its sovereign state of domicile. One exception could be cases in which foreign parental support commitments are in place. Other exceptions could include cases in which, due to the international nature of an insurer's business, a major portion of its business and financial resources are not exposed to the economic and political risks of its sovereign state. Since the IFS Rating is not assigned to any specific obligations of the insurer, the rating does not take into account the potential for government restrictions that could prevent specific obligations from being met on a timely basis, such as exchange controls placed on obligations owed in a foreign currency.

AAA

Exceptionally Strong. Insurers assigned this highest rating are viewed as possessing exceptionally strong capacity to meet policyholder and contract obligations. For such companies, risk factors are minimal and the impact of any adverse business and economic factors is expected to be extremely small.

AA

Very Strong. Insurers are viewed as possessing very strong capacity to meet policyholder and contract obligations. Risk factors are modest, and the impact of any adverse business and economic factors is expected to be very small.

A

Strong. Insurers are viewed as possessing strong capacity to meet policyholder and contract obligations. Risk factors are moderate, and the impact of any adverse business and economic factors is expected to be small.

BBB

Good. Insurers are viewed as possessing good capacity to meet policyholder and contract obligations. Risk factors are somewhat high, and the impact of any adverse business and economic factors is expected to be material, yet manageable.

BB

Moderately Weak. Insurers are viewed as moderately weak with an uncertain capacity to meet policyholder and contract obligations. Though positive factors are present, overall risk factors are high, and the impact of any adverse business and economic factors is expected to be significant.

B

Weak. Insurers are viewed as weak with a poor capacity to meet policyholder and contract obligations. Risk factors are very high, and the impact of any adverse business and economic factors is expected to be very significant.

CCC, CC, C

Very Weak. Insurers rated in any of these three categories are viewed as very weak with a very poor capacity to meet policyholder and contract obligations. Risk factors are extremely high, and the impact of any adverse business and economic factors is expected to be insurmountable. A 'CC' rating indicates that some form of insolvency or liquidity impairment appears probable. A 'C' rating signals that insolvency or a liquidity impairment appears imminent.

DDD, DD, D

Distressed. These ratings are assigned to insurers that have either failed to make payments on their obligations in a timely manner, are deemed to be insolvent, or have been subjected to some form of regulatory intervention. Within the 'DDD'-'D' range, those companies rated 'DDD' have the highest prospects for resumption of business operations or, if liquidated or wound down, of having a vast majority of their obligations to policyholders and contract holders ultimately paid off, though on a delayed basis (with recoveries expected in the range of 90%-100%). Those rated 'DD' show a much lower likelihood of ultimately paying off material amounts of their obligations in a liquidation or wind down scenario (in a range of 50%-90%). Those rated 'D' are ultimately expected to have very limited liquid assets available to fund obligations, and therefore any ultimate payoffs would be quite modest (at under 50%).

Notes

"+" or "-" may be appended to a rating to indicate the relative position of a credit within the rating category. Such suffixes are not added to ratings in the 'AAA' category or to ratings below the 'CCC' category.

Ratings of 'BBB-' and higher are considered to be "secure", and those of 'BB+' and lower are considered to be "vulnerable".

A Rating Outlook indicates the direction a rating is likely to move over a one to two-year period. Outlooks may be positive, stable or negative. A positive or negative Rating Outlook does not imply a rating change is inevitable. Similarly, ratings for which outlooks are "stable" could be upgraded or downgraded before an outlook moves to positive or negative if circumstances warrant such an action. Occasionally, Fitch Ratings may be unable to identify the fundamental trend, and in these cases, the Rating Outlook may be described as "evolving". Rating Watch: Ratings are placed on Rating Watch to notify investors that there is a reasonable probability of a rating change and the likely direction of such change. These are designated as "Positive", indicating a potential upgrade, "Negative", for a potential downgrade, or "Evolving", if ratings may be raised, lowered or maintained. Rating Watch is typically resolved over a relatively short period.

National Insurer Financial Strength Ratings

National ratings exclude the impact of sovereign risk and make use of the full rating scale from 'AAA' to 'C' as indicated below. It is important to note that each National rating scale is unique and is defined to serve the needs of the local market in question.

It is not related to the financial strength rating scale of any other national market. Comparisons between different national scales or between an individual national scale and the international financial strength rating scale are therefore inappropriate and potentially misleading. In order to ensure proper identification of the national market to which the rating applies, national market ratings carry a unique identifier which relates to that sovereign state, e.g. 'AAA(arg)'.

AAA(zaf)

Relative to other insurers in the same national market, insurers in this category have the highest capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same national market, these insurers have the lowest susceptibility to the effect of adverse business and economic factors.

AA(zaf)

Relative to other insurers in the same national market, insurers in this category have a very high capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same national market, these insurers have a very low susceptibility to the effect of adverse business and economic factors.

A(zaf)

Relative to other insurers in the same national market, insurers in this category have a high capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same national market, these insurers have a low susceptibility to the effect of adverse business and economic factors.

BBB(zaf)

Relative to other insurers in the same national market, insurers in this category have an acceptable capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same national market, these insurers have some susceptibility to the effect of adverse business and economic factors.

Notes

"+" or "-" are used with a rating symbol to indicate the relative position of a credit within the rating category. They are not used for the 'AAA' category.

The ISO Country Code is placed as a suffix in parentheses immediately following the rating letters to indicate the identity of the national market within which the rating applies. For illustrative purposes '(xxx)' has been used above.

Short-Term Insurer Financial Strength Ratings

A Fitch Short-Term Insurer Financial Strength Rating (ST-IFS Rating) provides an assessment of the near-term financial health of an insurance organization, and its capacity to meet senior obligations to policyholders and contract holders that would be expected to be due within one year. The analysis supporting the ST-IFS Rating encompasses all of the factors considered within the context of the IFS Rating, but with greater weighting given to an insurer's near-term liquidity, financial flexibility and regulatory solvency characteristics, and less weight given to longer-term issues such as competitiveness and earnings trends.

Fitch will only assign a ST-IFS Rating to insurers that also have been assigned an IFS Rating. Currently, ST-IFS Ratings are used primarily by U.S. life insurance companies that sell short-term funding agreements.

The ST-IFS Rating uses the same international ratings scale used by Fitch for short-term debt and issuer ratings. Ratings of F1, F2 and F3 are considered to be 'Secure', while those of 'B' and below are viewed as 'Vulnerable'.

F1

Insurers are viewed as having a STRONG capacity to meet their near-term obligations. When an insurer rated in this rating category is designated with a (+) sign, it is viewed as having a VERY STRONG capacity to meet near-term obligations.

F2

Insurers are viewed as having a MODERATELY STRONG capacity to meet their near-term obligations.

F3

Insurers are viewed as having a MODERATE capacity to meet their near-term obligations, and a near-term adverse change in business or economic factors would likely move the insurer to a 'vulnerable' rating category.

B

Insurers are viewed as having a WEAK capacity to meet their near-term obligations.

C

Insurers are viewed as having a VERY WEAK capacity to meet their near-term obligations.

D

Insurers have either been unable to meet near-term obligations, or the failure to meet such obligations is imminent.

National Insurance Claims-Paying Ability Ratings

AAA

Relative to other insurers in the same National market, insurers in this category have the highest capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have the lowest susceptibility to the effect of adverse business and economic factors.

AA

Relative to other insurers in the same National market, insurers in this category have a very high capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have a very low susceptibility to the effect of adverse business and economic factors.

A

Relative to other insurers in the same National market, insurers in this category have a high capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have a low susceptibility to the effect of adverse business and economic factors.

BBB

Relative to other insurers in the same National market, insurers in this category have an acceptable capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have some susceptibility to the effect of adverse business and economic factors.

BB

Relative to other insurers in the same National market, insurers in this category have a speculative capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have a moderate susceptibility to the effect of adverse business and economic factors.

B

Relative to other insurers in the same National market, insurers in this category have a vulnerable capacity to meet policyholder obligations and provide policyholder benefits. Compared with other insurers in the same National market, these insurers have significant susceptibility to the effect of adverse business and economic factors.

CCC, CC, C

Relative to other insurers in the same National market, insurers in this category have a highly vulnerable capacity to meet policyholder obligations and provide policyholder benefits. The insurer may be under the supervision of an insurance regulator and already may not be making all payments in a timely fashion.

D

Insurers, which have been placed in liquidation by insurance regulators for which policy or claims payments are being controlled, delayed or reduced.

Notes

“+” Or “-” are used with a rating symbol to indicate the relative position of a credit within the rating category. They are not used for the ‘AAA’ and ‘D’ categories.

The ISO International Code Suffix is placed in parenthesis immediately following the rating letters to indicate the identity of the National market within which the rating applies.

Money Market Fund Rating Scale

Rating Scale	MMF Rating Definitions
'AAAmmf'	Extremely strong capacity to achieve fund's investment objective of preserving principal and providing shareholder liquidity through limiting credit, market, and liquidity risk
'AAmmf'	Very strong capacity to achieve fund's investment objective of preserving principal and providing shareholder liquidity through limiting credit, market, and liquidity risk.
'Ammf'	Strong capacity to achieve fund's investment objective of preserving principal and providing shareholder liquidity through limiting credit, market, and liquidity risk.
'BBBmmf'	Adequate capacity to achieve fund's investment objective of preserving principal and providing shareholder liquidity through limiting credit, market, and liquidity risk. Capital preservation and shareholder liquidity may be at greater risk due to adverse market conditions, heightened redemptions, and/ or credit risk.
'BBmmf'	Uncertain capacity to achieve principal preservation. Shareholder liquidity impaired due to wholesale imposition of redemption restrictions.
'Bmmf'	Failure to preserve capital. Some loss of invested principal is likely, but recovery is expected to be high.

Ratings are not a recommendation or suggestion, directly or indirectly, to you or any other person, to buy, sell, make or hold any investment, loan or security or to undertake any investment strategy with respect to any investment, loan or security or any issuer. Ratings do not comment on the adequacy of market price, the suitability of any investment, loan or security for a particular investor (including without limitation, any accounting and/or regulatory treatment), or the tax-exempt nature or taxability of payments made in respect of any investment, loan or security. You acknowledge that Fitch is not your advisor and is not providing you any financial advice, or any legal, auditing, accounting, appraisal, valuation or actuarial services. The ratings should not be viewed as a replacement for such advice or services. Nothing in this bulletin is intended to or should be construed as creating a fiduciary relationship between you and us or between us and any user of the ratings.

ALL FITCH CREDIT RATINGS ARE SUBJECT TO CERTAIN LIMITATIONS AND DISCLAIMERS. PLEASE READ THESE LIMITATIONS AND DISCLAIMERS BY FOLLOWING THIS LINK: [HTTP://FITCHRATINGS.COM/UNDERSTANDINGCREDITRATINGS](http://FITCHRATINGS.COM/UNDERSTANDINGCREDITRATINGS). IN ADDITION, RATING DEFINITIONS AND THE TERMS OF USE OF SUCH RATINGS ARE AVAILABLE ON THE AGENCY'S PUBLIC WEB SITE AT WWW.FITCHRATINGS.COM. PUBLISHED RATINGS, CRITERIA, AND METHODOLOGIES ARE AVAILABLE FROM THIS SITE AT ALL TIMES. FITCH'S CODE OF CONDUCT, CONFIDENTIALITY, CONFLICTS OF INTEREST, AFFILIATE FIREWALL, COMPLIANCE, AND OTHER RELEVANT POLICIES AND PROCEDURES ARE ALSO AVAILABLE FROM THE CODE OF CONDUCT SECTION OF THIS SITE.

Copyright © 2010 by Fitch, Inc., Fitch Ratings Ltd. and its subsidiaries. One State Street Plaza, NY, NY 10004. Telephone: 1-800-753-4824, (212) 908-0500. Fax: (212) 480-4435. Reproduction or retransmission in whole or in part is prohibited except by permission. All rights reserved. All of the information contained herein is based on information obtained from issuers, other obligors, underwriters, and other sources which Fitch believes to be reliable. Fitch does not audit or verify the truth or accuracy of any such information. As a result, the information in this report is provided "as is" without any representation or warranty of any kind. A Fitch rating is an opinion as to the creditworthiness of a security. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed, suspended, or withdrawn at anytime for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of Great Britain, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.
